

## About the United Micronations Multi-Oceanic Archipelago (UMMOA)

The United Micronations Multi-Oceanic Archipelago (UMMOA) is a nation and community of nations.

The UMMOA claims several islands and atolls currently under the jurisdiction of the United States and Colombia, but already exercises some real sovereignty of a virtual kind through the Cesidian Root, an alternative Internet with root servers in Pennsylvania, Germany, Sweden, Thailand, and Japan. We hope to turn the Cesidian Root into our first national industry.

The UMMOA incorporates several companies, organisations, even intermicronational organisations through two entities: 1) Cyberterra, a mathematical point in the Adriatic Sea, which works as our virtual and cybernetic capital, our time and date standard, and is the start of the sovereignty we legally exercise over the high seas; and 2) the Fifth World Community, the world's first *diaxenospitia*, i.e. an inhabited locality with highly scattered buildings and properties located in New York State, South Carolina, Iowa, Belize, and Italy.

The UMMOA and its passports are recognised by the League of Indian Nations of North America (LINNA) and some other micronations, and it provides top-level domain (TLD) services in the Cesidian Root for the government of Antarcticland and many other micronations.

The UMMOA recognises all organisations, nations and states recognised by the Micronational Professional Registry (MPR), a micronational professional organisation, which in turn recognises in a *de facto* manner several Fourth World, Fifth World, and Sixth World nations. The MPR also recognises 24 sovereign states, and various other geopolitical entities.

The UMMOA is recognised by the International (States) Parliament for Safety and Peace, an intergovernmental organisation of states registered with the United Nations, so it is already a subject of international law, but not a member of the United Nations. While the UMMOA in truth doesn't really care about the United Nations, we would not mind if some sovereign UN states recognised us. We would particularly appreciate the recognition of the governments of Peru and Hungary, as both these states have outlawed genetically modified organisms (GMOs). Norway is another state we would not mind being recognised by. Not all UN states are bad, corrupt, or immoral, but unfortunately most are.

The UMMOA has signed three environmental treaties with other micronations. These treaties effectively give the UMMOA, and micronational signatories, legal control over all of the high seas of the world, and even legal control over the space above the Earth's atmosphere.

The Governor of the UMMOA, the Hon. Most Rev. Dr. Cesidio Tallini, is also the President and Founder of the Cesidian Root, an alternative Internet. He is also the Bishop of the Cesidian Church, a high priest who enjoys a triple religious lineage to Melchizedek, to Christ, and to Pahana. This means he can legally baptise, confirm, marry, ordain priests, and consecrate bishops. This means he can found educational institutions legally, and has in fact founded Saint René Descartes University, even consecrated new saints like Saint René Descartes. This means he can also practice a healing ministry under the full protection of US domestic and International indigenous peoples' law. The Governor of the UMMOA is also an environmentalist, an independent scholar, an international diplomat, and an author.
